1. A door frame protector, comprising:

an elongated, flexible latch-side protector having an inside surface, the latch-side protector having a pair of opposing longitudinal side walls, each of the side walls having an edge curled inward toward the inside surface.

- 2. The door frame protector according to claim 1, further comprising at least one strip of a padding material disposed longitudinally along said inside surface.
- 3. The door frame protector according to claim 1, further comprising a plurality of apertures defined in, and longitudinally spaced along, at least one of said side walls.
 - 4. A door frame protector, comprising:

an elongated, flexible hinge-side protector having an inside surface, the hinge-side protector having a first longitudinal side wall, the longitudinal side having an edge curled inward toward the inside surface, the hinge-side protector having a side-less edge opposite said side wall.

LITMAN LAW OFFICES, LTD. P.O. BOX 15035 ARLINGTON, VA 22215 (703) 486-1000 5. The door frame protector according to claim 4, further comprising at least one strip of a padding material disposed longitudinally along said inside surface.

- 6. The door frame protector according to claim 4, further comprising at least one securing piece, the securing piece being an elongated, flexible member having an inside surface and a pair of opposing longitudinal side walls, each of the side walls having an edge curled inward toward the inside surface.
- 7. The door frame protector according to claim 4, further comprising a second longitudinal side wall disposed along said side-less edge, the second side wall having an edge curled inward toward the inside surface, the second side wall having a length substantially shorter than the length of said side-less edge.
- 8. The door frame protector according to claim 7, wherein said second side wall is centered along said side-less edge.

9. A door frame protector, comprising:

an elongated, flexible latch-side protector having an inside surface, the latch-side protector having a pair of opposing longitudinal side walls, each of the side walls having an edge curled inward toward the inside surface; and

an elongated, flexible hinge-side protector having an inside surface, the hinge-side protector having a first longitudinal side wall, the first side wall having an edge curled inward toward the inside surface, the hinge-side protector having a side-less edge opposite said first side wall.

- 10. The door frame protector according to claim 9, further comprising at least one strip of a padding material disposed longitudinally along the inside surface of said latch-side protector.
- 11. The door frame protector according to claim 9, further comprising at least one strip of a padding material disposed longitudinally along the inside surface of said hinge-side protector.
